Projection on moving screen with Digimap function

Setup relies on:
1 x Modulo Player Pro with 1 output

User-friendly and flexible Management:
Free Remote Control Software compatible with Mac/PC
Show control: In this example, control of the video-projector (internal devices library)

Easy tracking of a moving screen:
Control of media parameters, including position, rotation, opacity, color... using external devices (OSC, Art-Net, MIDI, TCP/IP rotary encoder, K2 motion control console by Kynesis...)
In this example, support of the Posital absolute ixarc rotary encoder. The encoder provides the distance, thus the position of the screen. It is patched to the playlist to link the media position with the screen position
User-friendly wizard to easily calibrate incoming data
